

Journal of CME

An international journal on CME-CPD across the health professions

31 January 2024

2024 Special Collection on AI innovations in lifelong learning: Revolutionising CME and CPD

I am thrilled to invite you to contribute to the *Journal of CME* 2024 Special Collection on “AI innovations in lifelong learning: Revolutionising CME and CPD”. The goal of this special collection is to highlight the dynamic and rapidly evolving field of artificial intelligence (AI), with a focus on its impact and future potential in our profession.

Over the past year, AI has not only continued to advance technologically but has also profoundly influenced the way we work, think and solve problems. The integration of AI into various sectors has demonstrated its versatility, making this an opportune moment to reflect and project the trajectory of AI in continuing professional development (CPD).

We are actively seeking contributions that explore the multifaceted applications and implications of AI, especially as they relate to CPD. Whether you are an experienced AI researcher, a practitioner who has integrated AI tools into your work, or someone who is just beginning to explore the possibilities of AI, your insights are valuable. Even if you believe you have nothing to submit, I encourage you to reconsider; often, the simplest application of AI in our daily professional lives can offer the most relatable and insightful perspectives.

Submissions can range from detailed research articles and case studies to brief commentaries reflecting on personal experiences with AI. We are particularly interested in contributions that address the following:

- Innovative uses of AI in education, planning, assessment and analysis
- Challenges and solutions in adopting AI technologies
- Ethical considerations and best practices in AI implementation
- Predictions for the future impact of AI in CPD
- Personal narratives of transformation or insight brought about by AI

Manuscripts must be submitted by **31 July 2024**; articles will be processed and published once accepted, with the expectation that the special collection will be published in full before the year’s end. Please ensure that your manuscripts conform to the submission guidelines of the *Journal of CME*.

This special collection is not just an opportunity to share knowledge; it's a platform to inspire and be inspired. The stories of today lay the groundwork for the innovations of tomorrow. Let's come together to document this exciting journey with AI.

For submission details visit jcme.org and contact me at acrim@acoog.org if you wish to discuss a manuscript.

I am looking forward to your valuable contributions.

Andrew Crim, MEd, CHCP, FACEhp
